Pesticide

HEPTACHLOR

Name of Chemical:

Fact Sheet

PROHIBITION OF CONTINUED SALE OR USE OF HEPTACHLOR PRODUCTS

540/FS-89-053

Reason for Issuance:

FOR SEED TREATMENT

Date Issued:

APR 26 1989

Fact Sheet Number: 107.2

1. DESCRIPTION OF CHEMICAL

Generic Name: 1,4,5,6,7,8-8-heptachloro-3a,4,7,7a-tetra-

hydro-4,7-methano-lH indene (Chemical)

Common Name: Heptachlor

Trade and Other Names: 1,4,5,6,7,8,8-heptachlor-3a,4,7,7a-

tetrahydro-4,7-methanoindene; E-3314; Velsicol 104.

EPA Shaughnessy Code: 044801

Chemical Abstracts Service (CAS) Number: 76-44-8

Year of Initial Registration: 1952

Pesticide Type: Insecticide

Chemical Family: Chlorinated cyclodiene

2. USE PATTERN - SEED TREATMENTS

ACTION: Notice of PROHIBITION OF CONTINUED SALE OR USE OF HEPTACHLOR

PRODUCTS FOR SEED TREATMENT.

The Administrator has signed a Notice of Determination Pursuant to Section 6(a)(1) of FIFRA which will be published in the Federal Register. The Notice will prohibit any further sale or use of heptachlor products for seed treatment purposes. Any sale or use of heptachlor products for seed treatment will be a violation of Section 12(a)(1)(A) and/or Section 12(a)(2)(K) of the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA).

3. REGULATORY HISTORY

A. NOTICE OF INTENT TO CANCEL

Prior to 1974, heptachlor (along with a related compound, chlordane) was registered for a wide variety of insecticide uses. On November 18, 1974, the Administrator issued a notice of intent to cancel registrations for most uses of heptachlor (and chlordane). The basis for the notice of intent to cancel was evidence that heptachlor and chlordane had demonstrated toxic effects which may have significant adverse effects on human health, and evidence that both chemicals persist in the environment for many years after application, and as such, are subject to considerable movement from the site of actual application. The evidence on toxicity included a finding that heptachlor and its metabolite, heptachlor epoxide induce tumors in mice and that there was evidence of embryotoxicity in mice and rats.

Because of the persistence and wide application of heptachlor and chlordane products, heptachlor epoxide residues were routinely found in water, food sources, and human adult and fetal tissue. The Administrator therefore proposed to cancel all registered uses of chlordane and heptachlor, except those uses for subterranean termiticide control (see note) and dipping of non-food plants.

NOTE: It should be noted that subsequently on October 1, 1987, EPA issued an Order accepting the voluntary cancellation of chlordane and heptachlor termiticide treatment products. A Notice signed on April 5, 1988, in response to a District Court ruling established limits on the sale and use of existing stock of termiticide products after April 15, 1988.

B. THE SUSPENSION OF HEPTACHLOR PRODUCTS

On July 29, 1975, the Administrator issued a notice of intent to suspend (pursuant to FIFRA Section 6(c)) the registrations of heptachlor and chlordane that were subject to the notice of intent to cancel. The grounds for the notice of intent to suspend were "new evidence ... which confirm [ed] and heighten [ed] the human cancer hazard posed by [chlordane and heptachlor]" and the Administrator's determination that the cancellation proceeding resulting from the notice of intent to cancel would not be complete [ed] in time to "avert substantial additions of these persistent and ubiquitous compounds to an already serious human and environmental burden." The notice of intent to suspend applied to all uses covered by the notice of intent to cancel.

An evidentiary hearing on the proposed suspension took place between August and December of 1975. On December 12, 1975, the hearing examiner published a recommended decision dismissing the notice of intent to suspend. The basis for this recommendation was the hearing examiner's unwillingness to find "conclusively" that heptachlor and chlordane were (are) carcinogens in laboratory animals.

Included in the recommended decision was a discussion of the use of heptachlor for seed treatment. The document noted that inadequate alternatives for seed treatment existed at that time. The hearing examiner recommended that heptachlor for seed treatment not be suspended even if the Administrator were to disagree with the examiner on the question of the hazard posed by chlordane and heptachlor.

On December 24, 1975, the Administrator issued his decision on the proposed suspension of chlordane and heptachlor products. The Administrator ordered a suspension of a number of chlordane and heptachlor uses during the pendency of the cancellation hearing.

As to seed treatment, however, the Administrator found that no adequate alternatives to treatment with heptachlor existed at that time, and therefore found that the benefit from heptachlor for seed treatment exceeded the risks of such use during the time necessary to complete the cancellation hearing. Heptachlor for seed treatment was thus not one of the uses suspended by the Administrator.

C. SEITLEMENT OF THE CANCELLATION PROCEEDING

The cancellation proceeding continued until November of 1977, at which time the parties entered into settlement negotiations. The negotiations resulted in an agreement which was ratified in a Final Order issued by the Administrator on March 6, 1978. The Final Order resulted in the eventual cancellation of all products subject to the original notice of intent to cancel notice. For seed treatment, the effective date of cancellation was September 1, 1982 for barley, oats, wheat, rye and corn, and July 1, 1983 for sorghum. The Order also contained production limitations; production of heptachlor for seed treatment was limited to 175,000 pounds annually from 1978 to 1982, and to 100,000 pounds in 1983. These production limitations were intentionally less than the use of heptachlor for seed treatment purposes in 1976 (which was 200,000 pounds).

The purpose of the phased cancellations was to provide a "transition period" to allow users to make an orderly adjustment to alternative crops or pest control technologies where possible or to promote development of alternative pest control technologies where none then existed.

D. EXISTING STOCKS DETERMINATION

The sale and use of existing stocks of pesticide products cancelled after a notice of intent to cancel is issued pursuant to Section 6(b) of FIFRA are controlled by Section 6(d)(1) of FIFRA. It provides in part,"... the Administrator may permit the continued sale and use of existing stocks of a pesticide whose registration is canceled under [Section 6(b)] to such extent as he may specify if he determines that such sale or use is not inconsistent with the purposes of [FIFRA] and will not have unreasonable adverse effects on the environment."

At the time the Agency issued the Final Order, it was expected based upon the use practices at that time that sale and use of existing stocks of cancelled products would cease approximately within one year of the effective cancellation date. The existing stocks allowance and phased cancellation was to result in approximately a six year transition period for users of heptachlor treated seeds to adapt alternative management practices after 1978.

The six year transitional period contemplated in 1984 ended over four years ago. The Agency believes that ten years is more than sufficient time for users to find alternatives to heptachlor seed treatment. Moreover, although some heptachlor continues to be used for seed treatment purposes, the transition away from heptachlor seed treatment has largely been completed (the amount of heptachlor used for seed treatment in 1987 was only 1% of the amount used in 1974).

While the benefits associated with heptachlor seed treatment have greatly diminished in the past ten years, the Agency's general concerns with the use of heptachlor have not diminished.

In addition, in late January and early February of 1986, the Food and Drug Administration (FDA) found very high levels of heptachlor and trans-chlordane in finished livestock feeds.

A fermentation/distillation firm purchased and used obsolete pesticide treated seed grain in their fermentation process. The spent distillers mash was, in turn, used in the manufacture of finished animal feeds and fed to dairy cattle. When FDA tested the milk from dairy herds fed the contaminated feed, the levels of heptachlor epoxide (an animal metobolite of heptachlor) found exceeded, by as much as 75 times, the FDA action level of 0.1 ppm for heptachlor epoxide in the milk fat.

As the result of this one incident, taxpayers have already incurred more than ten million dollars in investigative and indemnification costs. Total losses for all affected parties are expected to exceed sixteen million dollars.

FDA and USDA subsequently carried out an extensive investigation to determine how frequently obsolete pesticide treated seeds were being fed illegally to meat and/or milk producing animals or had entered the livestock feed markets. In over 1000 investigations, well over 100 violations were found. Feeding of obsolete heptachlor treated seed was involved in at least two of these additional violations.

EPA subsequently has determined that sizable inventories of cancelled heptachlor seed treatment products remain in the channels of trade. At the present levels of use, these products would be available for use for the next 70 years.

As previously stated, under Section 6 (a)(1), the Agency may permit the continued sale and use of existing stocks of a cancelled pesticide only if the Agency determines that such sale and use is consistent with FIFRA and does not result in unreasonable adverse effects on the environment.

Under the circumstances, the Agency can no longer find that continued sale or use of heptachlor for seed treatment will not have an unreasonable adverse effect on the environment. The Agency therefore no longer believes that such sale or use is consistent with Section 6(a)(1) of FIFRA.

The Agency accordingly served notice in the Federal Register of that sale or use of stocks of heptachlor for seed treatment is no longer permitted, and that any further sale or use shall be a violation of Section 12(a)(1)(A) and/or Section 12(a)(2)(K) of FIFRA.

While any further use of heptachlor for seed treatment is not permitted, existing stocks of seed grain previously treated with heptachlor may be sold and planted in accordance with good agronomic practices.

4. GUIDANCE ON THE STATUS OF HEPTACHLOR SEED TREATMENT PRODUCTS AS HAZARDOUS WASTES

Unused quantities of cancelled heptachlor seed treatment products can no longer be used as directed on their label. They, therefore, fit the definition of a solid waste as defined in 40 CFR 261.2 and 261.33 when they are discarded or held with the intent to discard.

A hazardous waste is any solid waste which has been listed as a hazardous waste in 40 CFR Part 261 Subpart D or a solid waste which exhibits any of the characteristics of hazardous waste identified in 40 CFR Part 261 Subpart C ignitability, §261.21; corrosivity, §261.22; reactivity, §261.23; and/or E.P. toxicity, §261.24.

Heptachlor is listed as an acutely hazardous waste (PO59) in 40 CFR §261.33(e). Any unused heptachlor seed treatment products, rinsate or containers which have not been properly cleaned (triple rinsed as defined §261.7) are therefore acutely hazardous wastes, as defined in 40 CFR §261.33(e) if they are discarded or intended for discard.

Any person by site who holds cancelled heptachlor seed treatment products when they become wastes is a "generator" of hazardous wastes as defined in 40 CFR Part 261. A generator must comply with the requirements of the Resource Conservation and Recovery Act (RCRA) and any other applicable Federal, State, and local laws and regulations.

Those who hold cancelled heptachlor seed treatment products at the time they become wastes are defined as "generators" and they fall into one of three categories of waste generators. They are:

a. Conditionally Exempt Generator - one who currently holds or generates no more than 1 kilogram (2.2 pounds) of acutely

hazardous waste [heptachlor seed treatment products, a listed acutely hazardous waste (P059)] and who generates no more than 100 kilograms (220 pounds) of other hazardous waste in any calendar month.

A conditionally exempt generator is not required to obtain a permit or interim status (40 CFR Part 261.5). He/she, however, is required to:

- Identify all hazardous waste held or generated, §261.5(c).
- Send the hazardous waste to an authorized facility, §261.5(f)(3).
- Never accumulate more than 1000 kilograms (2200 pounds) of hazardous waste and/or more than 1 kilogram (2.2 pounds) of acutely hazardous waste on his/her property, §261.5(f)(2) and (g)(2).

Acutely hazardous waste (PO59) may be held [up to 1 kilogram (2.2 pounds)] in containers which are in good condition (do not leak) and are compatible with the waste.

b. Small Quantity Generator - one who holds or generates no more than likilogram (2.2 pounds) of acutely hazardous waste [heptachlor seed treatment products, a listed acutely hazardous waste (PO59)] and generates between 100 and 1,000 kilograms (220 to 2,200 pounds) of other hazardous waste in any calendar month.

A small quantity generator must comply with the requirements of 40 CFR Part 262, Standards Applicable to Generators of Hazardous Waste including obtaining an EPA ID number, using the Uniform Hazardous Waste Manifest, accumulating waste in accordance with § 262.34(d) and complying with recordkeeping and reporting requirements of §262.40(a), (c) and (d); § 262.42(b); and §262.43.

Small quantity generators who choose to store or treat beyond the allowances provided in 262.34(d)-(f) or to dispose of hazardous wastes or acutely hazardous wastes at their own facilities are subject to the full regulatory requirements of 40 CFR Parts §264 through §270 which pertain to the operation, maintenance and permitting of treatment, storage and disposal facilities.

Generators must send heptachlor seed treatment products that are not treated or disposed of on site to a hazardous waste facility permitted to accept them.

c. Generator - one who holds or generates more than 1 kilogram (2.2 pounds) of acutely hazardous waste [heptachlor seed treatement products, a listed acutely hazardous waste (PO59)] or more than 1,000 kilograms (2,200 pound) of hazardous waste in any calendar month.

A hazardous waste "generator" as defined above must comply with all applicable hazardous waste management requirements set forth in 40 CFR Part 262, Standards Applicable to Generators of Hazardous Waste. Those who choose to transport their own hazardous waste must comply with 40 CFR Part 263, Standards Applicable to Transporters of Hazardous Waste.

If a generator stores his/her waste for longer than 90 days, then he/she must obtain a RCRA hazardous waste storage permit and comply with the requirements of 40 CFR Part 264 and 40 CFR Part 265. An extension of 30 days may be granted by the Regional Administrator under certain emergency situations.

Generators who choose to store or to treat beyond the allowances provided in § 262.34(a) or to dispose of hazardous wastes or acutely hazardous wastes at their own facilities are subject to the full regulatory requirements of 40 CFR Parts 264 through 270 which pertain to the operation, maintenance and permitting of treatment, storage and disposal facilities.

Generators must send heptachlor seed treatment products that are not treated or disposed of on-site to a hazardous waste facility permitted to accept them.

Obsolete seed, which are no longer viable or suitable for planting and which have been treated with heptachlor are not "listed" hazardous wastes in 40 CFR 261 Subpart D. Their status as "characteristic" hazardous wastes under 40 CFR Subpart C 261.20 through 261.24 and 40 CFR Part 261 Appendix I, II and III must be determined by the generator under 40 CFR 261.11.

It should be kept in mind, however, that some serious environmental inpacts have resulted from the inappropriate disposal of obsolete heptachlor-treated seeds. Every effort should be made to plant existing stocks of heptachlor-treated seeds in accordance with good agronomic practices before they become obsolete.

Should the generator find that obsolete heptachlor-treated seed is a "characteristic" hazardous waste under 40 CFR 262.11, then the seed may be stored, treated or disposed of only at a permitted hazardous waste facility. EPA recommends giving serious consideration to incineration.

On the other hand, if after the aforementioned analysis, the obsolete heptachlor-treated seeds are determined to be non-hazardous, the obsolete heptachlor-treated seeds could be landfilled in accordance with the individual state and local requirements for disposal of solid waste. If landfill of the seed is not viable in your area, then consideration must again be given to incineration as the appropriate means of destruction.

5. CONTACT PERSON AT EPA, OFFICE OF PESTICIDE PROGRAMS:

James G. Touhey
Senior Agricultural Advisor (H-7506C)
Field Operations Division
Office of Pesticide Programs
Environmental Protection Agency
401 M Street, SW
Washington, D.C. 20460

Office location and telephone number:

Room 710 Crystal Mall, Building No. 2 1921 Jefferson Davis Highway Arlington, VA 22202 (703) 557-5664

6. CONTACT FOR ADDITIONAL INFORMATION REGARDING DISPOSAL

For those states which have RCRA authorization, a concerned individua should contact the hazardous waste management agency of that state for additional information concerning the state disposal requirements (see Appendix for list of authorized states and their addresses and phone number).

For non-authorized states the concerned individual should contact the hazardous waste management division of the EPA region in which his/her state falls (see Appendix for list of states by regions).

In addition, concerned parties may call the RCRA/Superfund Hotline toll free (1-800-9346) or may call commercially on (1-202-382-3000) for more detailed information concerning RCRA requirements.
